

## BUYER'S GUIDE

### Soundscape your home

At Quiet Mark™, we created the International mark of approval for low-noise technology, services and solutions. We use scientific testing and assessment to identify and award quiet products—500+ to date—that also perform well at their core. Look for these and other 3-star Quiet Mark-awarded products, like the **magimix®** range of food processors with impressively low sound emissions, to make purchase decisions easier for you as you look to improve the soundscape of your home!

### Maximum Performance. Minimum Noise.

Quiet Mark tested the Philips air purifiers in a typical home environment, with the products placed on a hard floor and run on each power setting. The sound emissions from these purifiers was impressively low, well under 60 decibels even on the most powerful settings. With a patented dual airflow system, the **Philips 5000i Series Connected Air Purifier**

uses a combination of six premium filters to deliver superior performance in rooms up to 454 sq. ft. against:

- Allergens
- Gases
- Particles
- Bacteria
- Viruses

Optimized curvature of the air tunnel minimizes noise for quiet operation day and night.

### Half the Noise. Packed with Power. Portable Design.

When looking to take the chill out of a room, or bring some needed heat to your space, you'll want something less noisy, so you can rest peacefully or enjoy quiet conversation. Not many appliances in your home are used for hours at a time, so choose a Quiet Mark-awarded heater to ensure you stay warm without being disturbed. Delivering 1500W of personal heating power in a sleek tower design, the **De'LONGHI Ceramic Heater** features a unique Silent System, cutting noise by half. It comes with a full-function remote and motorized oscillation to provide full-room warm air circulation. Plus, its ECO Plus Function automatically adjusts heat and power for the most economical warmth.

### Leave Floors Spotless with Minimal Effort.

Quiet Mark testing of floor care products captures the noise that the user experiences in the context of a real-life environment—measuring sound pressure received at head height and arm's length away from the device. The **Kärcher FC 5 Floor Cleaner** offers a quieter way to clean hard floors in a single, easy step. There's no need to vacuum beforehand—a patented two-in-one function lets you mop and suction away wet and dry dirt at the same time. Your freshly cleaned floors will dry in two minutes or less.
